Here is a picture of dashboard and model for the Social Foundation dummy data that I have created using Power BI.

In the Dashboard above, there are 2 Filters located on the top right of the dashboard. This filter can be used to filter dashboard data based on User Type or based on student names along with all achievement dates owned by each student. On the top left, there is the Sum of the Total Amount by Month and User Type. This data displays the total transactions made by each User Type during March-May 2021. At the bottom left, there is a Pie Chart that illustrates the proportion of the number of Transactions made based on the Purpose of the Transaction from March-May 2021.

In the top right Line Chart, it shows the financial balance (comparison of income and expenses from March-May 2021). In the bottom right Table, it shows the achievement data and the month the achievement was obtained. If a filter is made based on the name or date of the achievement, then this table will also change following the filter.
